Important Notes on operating a ESX HD Camera with an ESX Smart Naviceiver

Please find the model number of your base device on the slide-in housing or on the certificate of authenticity.

ESX SMART NAVICEIVER i40 VN740 - VN940 - VN1040 up to V4 / V4R

Proceed as follows:

- > Turn on the Smart Naviceiver
- > Go to the **App Menu**
- > Tap on **Settings**
- > Tap on **Car Settings**
- > Tap on **Video**
- > Tap on **Camera Type**
- > Enter **0000**
- > Confirm with **OK**

For the standard full screen view,
tap on **360-720P**.

For hybrid view with selection menu,
tap on **360-720p-F+R**

ESX SMART NAVICEIVER i60/i61 VN1060 - VN1061

Proceed as follows:

- > Turn on the Smart Naviceiver
- > Press the camera direct button or
engage reverse gear
- > Tap the **screen** in the camera view
- > Tap on the **gear symbol**
- > Tap at **Camera Settings** on the **Triangle Symbol**
- > Choose the setting **AHD 720p 25 fps**

If the camera view does not activate when you put the
vehicle in reverse, or if you have other problems with the
camera view, activate the function **Image debounce**.

*** ATTENTION: Do not make any other settings in this menu.
This could cause a malfunction in your ESX Smart Naviceiver.**

NOTICE FOR ALL MODELS: Depending on the operating system, the ESX Smart Naviceiver restarts after changing
the camera settings. Then carry out a functional test of the HD Camera. Please note that cameras from other manufactur-
ers may require a different matching preset. Please note the manufacturer's technical data.
