

## INSTALLATION OF THE TMC-DRIVER

If the following error message is showing up, the TMC driver for the USB TMC module is missing. This error message should occur only with the OS Version 1.55 or 1.55-U1.

Download at first the driver via [www.esxaudio.de/navi](http://www.esxaudio.de/navi)  
>Downloads. Unpack the .zip-archive with f.e. Win Rar ([www.winrar.com](http://www.winrar.com)) on a USB stick or a SD card.

Connect the USB stick or the SD card with the ESX Naviceiver and open then under >Apps > Files > Other > USB or SD the appropriate folder and start the application CP210x\_install.exe (white icon).

The device confirm the installation afterwards. Restart the device.

## **Legal information**

The download files for the installation are provided without any guarantee.

We assume no liability for any damages or problems to your computer that may arise from the download. This includes also damage to the operating system or consequential loss of data on your ESX device, which was caused by operator error or by third party software or computer viruses. The functionality and the correct presentation for the subsequently installed skins can sometimes be restricted or incorrect in some ESX naviceivers, because not all ESX naviceiver models are similarly equipped.
