

HOW TO INSTALL AN ADDITIONAL SKIN

- 1.) Please visit under “www.esxaudio.de/navi” the “Downloads” section and download under “Skins” the desired files. These files are stored in an file archive (.rar).
- 2.) Unpack the downloaded skins (file suffix .rrui) with an appropriate software program (e.g. „Winrar“, refer to www.win-rar.com) on an USB stick and connect the stick to the ESX device.
- 3.) Open under “Apps” the application “Options” and tap under „Skin“ the (upper) field „Browse“ on the ESX device.

- 4.) Then choose under „Select Skin File“ „USB“ as source and then open the directory, where you have stored the skins.

- 5.) Select the desired skin and confirm the selection with „OK“. The desired skin is now installed on your ESX device.

6.) Your chosen skin is applied immediately.

Legal information

The download files for the installation are provided without any guarantee.

We assume no liability for any damages or problems to your computer that may arise from the download. This includes also damage to the operating system or consequential loss of data on your ESX device, which was caused by operator error or by third party software or computer viruses. The functionality and the correct presentation for the subsequently installed skins can sometimes be restricted or incorrect in some ESX naviceivers, because not all ESX naviceiver models are similarly equipped.
